Percentage of Middle School Students in: ..... 15
Percentage of Special Education Students at an acceptable level ..... 15
Percentage of the Class of 1999 Special Education Students Who Graduated ..... 15
Percentage of the Class of 1996 Special Education StudentsWho Graduated After 7 Years15

## Introduction

This is the second Report Card on the New York City public schools issued by the Center for Civic Innovation, the first of which was prepared in cooperation with the Public Education Association in 1998. The "just the facts" format is designed to provide a statistical review of performance over a period of ten years, drawing on data made available by the State Education Department and the City Board of Education.

Along with recent changes in the recorded performance of students, there are more notable long term patterns that give us a fuller picture of what is happening. For example, in the short term, high school completion rates are slightly up and the scores on standardized tests have improved. The slight increase in high school completion is overshadowed by a long-term trend in which about half the students complete their studies in four years, and an additional $20 \%$ do so by the age 21 . With past Regents examinations as a guide, it appears that, so long as these examinations remain rigorous, about $16 \%$ of the students in New York City will be able to meet the state's new and more rigorous requirements for a high school diploma in the coming years.

An increasing number of students have been forsaking a traditional diploma for what has been inappropriately dubbed an "equivalent diploma" or GED. The truth is that those students who do not receive a traditional diploma are less likely to attend and do well in college. While New York will always have a large number of jobs available for unskilled workers, it is becoming increasingly difficult to make a good living in the high tech world of the twenty-first century without the proper credentials. The common path that gave New York its reputation as a gateway to opportunity for many past
generations begins with a high school diploma and leads to a college degree. Proportionately less than half as many city students take the SAT exams for college admissions as their peers around the state. Of those who take the test, city students average 40 to 50 points lower in the various subject areas.

The recent improvements in standardized test scores administered by the State Education Department and City Board of Education are somewhat more encouraging. The rise is evident both on state tests given to fourth graders and on city tests given in other grades; and the improvement is evident across most of the city. The larger picture, however, is not so rosy. Both city and state tests indicate that about $60 \%$ of the children attending elementary and middle schools in the city are not reading at an acceptable level. Approximately 70\% have not attained proficiency in math.

Within this general pattern is a large disparity in academic performance defined by race. By and large the gap between African American and Hispanic students on the low end, and white and Asian students on the upper end is profound, and it is apparent on all measures of academic performance-state tests, city tests, SAT scores and graduation rates.

The gap in performance associated with race is not unique to New York City. For the last thirty years it has been a widely recognized American phenomenon, most dramatically apparent in urban settings. The data in this report show that students who attend urban public schools throughout the state lag behind their counterparts who live in suburban and rural areas. The great danger in highlighting this fact is that it often becomes a basis for using race as an
excuse for academic failure, leading to a quiet resignation about the current state of affairs in many inner-city communities. A large proportion of low-performing students get inappropriately placed in special education and bilingual education programs, where academic outcomes are even more discouraging.

When one looks more closely at the available information, something else becomes apparent. New York City has a high percentage of students who are in the lowest quartile of performance. Many of these students attend schools that end up on the state's list of chronically low performing schools (the SURR list). In fact all but eight of the 105 schools included on this notorious list are in New York City. This list of 97 schools, as extensive as it might be, actually understates the incidence of academic
failure at the school level. In fact, nearly 30 percent of the 677 elementary schools in NYC have less than 30 percent of their students reading at an acceptable level; half the elementary schools have less than 40 percent reading at an acceptable level.

The urgency communicated by this information should be clear. While the turnaround of the public school system is likely, even under the most optimistic of circumstances, to be an incremental process, there are some, all too many students who are in need of immediate relief from a culture of despair that captures chronically failing schools in the poorest communities of the city. In such places race and class have not just provided an excuse for academic failure; failure has become an implicit rationale for a continuing state of academic neglect.

At what rate do NYC students finish high school in the traditional four years?

Four-Year Completion Rates, Classes of 1989-1999

## How will city students fare under the state's new graduation requirements?

Students who entered ninth grade in 1996, and all subsequent classes, will have to pass a set of Regents exams in order to earn a high school degree. To receive a Regents diploma, students must score above 65 on all five examinations. Presently, the State allows those taking the exams who score between 55 and 64 to receive a local diploma. This practice will end with the incoming class of 2004.

1998 Percentage of Average Enrollment Passing Regents Exams Required for Graduation

*By spring 2003 all students will be required to pass Regents exams in these subjects to receive a high school diploma.

How well has the city responded to the state's challenge in the past?
Percent of Graduates Earning Regents Diplomas 1989-1998
*In 1989, the state
made it more
difficult to earn
Regents diplomas.
The rest of the state
has adapted over
time. NYC and
other large cities have not.

Source: State Education Department, A Report to the Governor and the Legislature on the Educational Status of the State's Schools, April 1999, p. 51

How many city graduates need remedial work in college?
*J ust 59\% of CUNY's entering baccalaureate students and only $16 \%$ of entering associate degree students pass all their basic skills exams.

Source: CUNY Student Data Book, 1998

How well are students reading in elementary and middle school?

Citywide Reading Test Scores, 1994-2000
\% at an

| Year | acceptable level | Test |
| :--- | :---: | :--- |
| 2000 | 40.8 |  |
| 1999 | 35.7 | New CTB-R Test: Adjusted for rescaling to proficiency levels |
| 1998 | 43.6 | Equated for change from 1991 to 1996 norms |

1997 47.3
1996 43.7 Adjusted for change in ELL exemption
1995 42.1 Adjusted for change to CTB-R
1994 47.5

The city instituted the CTB-R and CTB-M exams in 1998. In 1999 they raised the norms for what constituted acceptable performance levels. This "rescaling" lowered the percentage of students who were deemed to have performed at an acceptable level in 1998.

Sources: State of City Schools '98 and BOE, A Report on the Results of the CTB-Reading Test (CTB-R) Administration in New York City, Including the Results of the State Grade Four English Language (ELA) Test, Chancellor's 60-Day Report, A Report on the CTB-Mathematics Test (CTB-M) Administration in New York City, June 2000

How well are students doing in mathematics in elementary and middle school?

Citywide Mathematics Scores 1994-2000

| Year | \% at an <br> acceptable level | Test |

The Center for Civic Innovation's (CCI) purpose is to improve the quality of life in cities by shaping public policy and enriching public discourse on urban issues.

CCI sponsors the publication of books like The Entrepreneurial City: A How-To Handbook for Urban Innovators, which contains brief essays from America's leading mayors explaining how they improved their cities' quality of life; Stephen G oldsmith's The Twenty-First Century City, which provides a blueprint for getting America's cities back in shape; and George Kelling's and Catherine Coles' Fixing Broken Windows, which explores the theory widely created with reducing the rate of crime in New York and other cities. CCI also hosts conferences, publishes studies, and holds luncheon forums where prominent local and national leaders are given opportunities to present their views on critical urban issues. Cities on a Hill, CCI's newsletter, highlights the ongoing work of innovative mayors across the country.
